PRN-6 | prinson-nazareth

Professional Summary

MCA student with a strong foundation in Python, software development, and AI-based automation. Hands-on experience building web applications, AI agents, and desktop automation tools. Interested in software engineering, backend development, and privacy-focused AI systems, with an emphasis on modular architecture, problem-solving, and continuous learning.

Technical Skills

Languages: Python, Java, JavaScript, HTML, CSS

Frameworks & Libraries: React.js, Node.js, Express.js

AI & Automation: AI Agents, Function Calling, Tool Use, Local OS Automation

Databases: MongoDB

Developer Tools: Git, GitHub, Postman, Linux

Core Areas: Backend Development, Web Development, AI & Automation

Projects

PRIVACY68 | *AI Automation Tool* Sep. 2026 – Present
Python, Function Calling, AI Agents, Local Tool Execution GitHub | Live Demo

- Developed a Python-based AI agent using function calling to automate desktop and system tasks with a privacy-focused architecture.
- Integrated real-time web search and local tool execution to support information retrieval and system automation.
- Designed a modular architecture for extending AI capabilities while maintaining core functionality.

AJ-ASTRIX 2026 | *College Fest Website* Apr. 2026
React.js, Vite, Tailwind CSS, GSAP GitHub | Live Demo

- Developed an interactive and responsive college fest website featuring event information, schedules, and participant-focused interfaces.
- Built reusable React components and interactive animations using Tailwind CSS and GSAP to improve the website's visual experience and usability.

Personal Portfolio Website Feb. 2026
React.js, Vite, Tailwind CSS GitHub | Live Demo

- Designed and developed a personal portfolio website to showcase projects, technical skills, and achievements.
- Organized project and profile information into a structured, responsive interface optimized for desktop and mobile devices.

WEB66 | *Codebase Intelligence & Dependency Visualizer* 2026
Node.js, JavaScript, WebSockets, Canvas 2D GitHub

- Built a zero-dependency Node.js CLI that recursively scans TypeScript, JavaScript, and Python codebases to extract files, functions, classes, and types into a node/edge dependency graph.
- Implemented a built-in HTTP and WebSocket server with recursive, debounced file watching for live re-analysis and real-time browser hot-reload.
- Designed an interactive cosmic Canvas 2D visualizer using a radial layout, force-directed physics, and animated energy pulses to explore imports and declarations.
- Published as the npm package `@leozodiac/web66`, runnable anywhere via `npx web66`.

Education

Master of Computer Applications (MCA) 2025 – 2027
AJ Institute of Engineering & Technology, Mangaluru *Currently Pursuing*

Bachelor of Computer Applications (BCA) 2023 – 2025
Samvedana Science and Commerce First Grade College

Certifications

- **Python for Data Science** | NPTEL | 4-Week Program
- **C Programming Basics** | Simplilearn SkillUp
